

FALL 2018 HONORS SEMINAR

UNHO 267 Honors: Environment's Role in Global Society

Dr. Don Hodges, Department of Forestry, Wildlife, and Fisheries

TR 11:10 a.m.-12:25 p.m. | HBC 118 | CRN: 48161

General Education: Cultures and Civilizations

CHP: Human Cultures and Civilizations

We will examine the role that the natural environment has played globally in social and economic development over time, emphasizing the relationship between society and the natural world for a wide range of values - consumptive, spiritual, recreational, and cultural. This will be accomplished through a review of the history of thought and use of the environment and how cultural development and change have been influenced by the natural environment, followed by an examination of selected environmental and natural resource issues and society's responses.

Dr. Hodges is a Professor of Forest Economics and Policy and Director of the University of Tennessee Natural Resource Policy Center. His academic research emphasizes the economic and policy aspects of forest management and use, ecosystem services, and international trade. He regularly teaches a first-year seminar for the Honors Program in forests and sustainability.
